1. Draw a shape with parallel lines. Label the parallel lines.

2. Draw a shape with perpendicular lines. Label the perpendicular lines.

3. Which of the following triangles is a right triangle?
   - a. 
   - b. 
   - c. 
   - d. All of the above.

4. Define the shape being described.
   - ______ a 4 sided shape with 2 sets of parallel lines.
   - ______ a 4 sided shape with only 1 set of parallel lines.
   - ______ a 4 sided shape with all right angles and sides of the same length.

5. Two students are working on right angles in class. Edward determines that right triangles can only have 1 right angle. Christian disagrees and says that triangles can have more than 1 right angle. Which student is correct? Provide drawings and a written explanation to support your thinking.
